## JET SUEDE™

HIGHLY DURABLE SUEDE-LIKE  
FEEL COATING NOW AVAILABLE  
FOR CABIN INTERIORS

**Sherwin-Williams Aerospace Coatings introduces Jet Suede™, a two-component urethane topcoat system designed to enhance the feel of aircraft interiors.**

Jet Suede matches an array of aircraft OEM colors with a flat finish. It has a soft feel that is ideal for rigid and flexible plastics, as well as other substrates. The high-solids and low bake characteristics of Jet Suede make it a cost-effective alternative for painting interior plastic parts.

## SHERWIN-WILLIAMS AEROSPACE JET SUEDE™ INTERIOR COATING

Highly durable 'suede' feel coating now available for cabin interiors

Using an interior cabin coating like Jet Suede is a cost effective way to improve the passenger experience in the economy or premium class sections of the aircraft. Jet Suede has strong chip resistance, doesn't mar and is easy to clean. That means it's less expensive than leather and much easier to repaint than replace or repair.

Jet Suede is appropriate for application by both OEM and MRO aftermarket professionals. While the expense of an MRO to replace or repair leather armrests, cockpit yokes or cabin fabrics is considerable, Jet Suede achieves the same effect faster, easier and with less expense.

Thousands of custom colors are achievable with Jet Suede, including the neutrals most commonly utilized in interior

settings. A Jet Suede finish delivers an upscale, textured feel to any surface to which it is applied, and features a durable finish that will look great for years to come.

### JET SUEDE INTERIOR COATING ADVANTAGES:

- Excellent performance on rigid and flexible plastics
- Offers a soft feel to the touch
- Broad range of low gloss solid colors
- Excellent chemical, abrasive and mar resistance
- 1.8-2.2 mils dry film thickness
- Quick drying and easy to apply
- Simple 3:1 Mixing Ratio
