

COMPOSITE SURFACERS

FILLING THE NEED FOR
TODAY'S ADVANCED
COMPOSITE SUBSTRATES

Sherwin-Williams Aerospace Coatings provides an extensive lineup of exterior and interior composite surfacer products. Both sets of filler products are available in either a gray or white finish and offer extremely fast-drying characteristics. This significantly improves productivity and with an available accelerated reducer, aircraft parts can be sanded in just under 30 minutes.

Whether painting an entire aircraft or small parts, these composite filling products are ideal as they are easily built up and become easy to sand. Both exterior and interior composite surfacers are quality, two-component urethane products that provide excellent gloss holdout, resistance to film shrinkage, versatility and flexibility.

COMPOSITE SURFACERS

SHERWIN-WILLIAMS ADVANCED COMPOSITE SURFACERS

Intended for use on composite for the aircraft's exterior and interior parts, Sherwin-Williams composite fillers are ideal to fill and cover surface imperfections resulting in a smooth surface.

CM0481030 and CM0481035 are exterior urethane surfacers that provide performance, versatility and high productivity. They offer excellent gloss holdout, resistance to film shrinkage, easy sanding and flexibility. They are ideal to fill and cover surface imperfections to create a smooth surface for topcoat applications.

As opposed to aluminum substrates where the primer's role is to protect against corrosion, these composite surfacers meet the need to fill in the carbon weave in preparation for it to receive the topcoat finish.

The JetFlex® interior composite surfacers (CM0981030 - gray; CM0981035 - white), are intended for use on interior composites for aircraft and parts and are ideal to fill and cover while providing excellent spreadability. Another important feature: they meet the heat release requirements of FAA FAR 25.853.

EXTERIOR COMPOSITE SURFACER CM0481030; CM0481035 ADVANTAGES:

- Forms a tough film with outstanding recoat/intercoat adhesion properties
- Excellent sanding characteristics
- Compatible with SKYscapes® rain erosion resistant exterior topcoat
- Quick dry to increase shop productivity
- Reduces process time for topcoat preparation
- Resistance to film shrinkage

JETFLEX® INTERIOR COMPOSITE SURFACER CM0981030; CM0981035 ADVANTAGES:

- Ideal for filling and covering composite surfaces and imperfections
- Excellent sanding characteristics
- Quick dry to increase shop productivity
- Simple 4:1 mix ratio
- Easy to spray, spread or brush on composite
- Compatible with JetFlex interior topcoat
- Resistance to film shrinkage
